

The Case Against Hepatitis B Vaccination: Prevent Your Newborns Infants from Being Permanently Injured (Paperback)

By Kevin A Muhammad

Techdoc, Incorporated, 2009. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Government laws and recommendations coerce us into receiving dozens of vaccinations. Every year, millions of newborns and infants are injected with genetically-engineered pathogens, dangerous metals and industrial chemicals-called vaccines. The hepatitis B vaccine is administered moments after the child is born, immediately putting the newborn on the path of disease. There is a direct link between vaccinations and the broad range of diseases now plaguing newborns, infants, toddlers and adolescents. This makes childhood vaccinations the citizenry s most urgent health issue, today. This book refutes the CDC s rationale for the universal vaccination of newborns and infants with hepatitis B vaccines, while describing the political and economic corruption associated with public health vaccination laws and recommendations.
