

The Search for Extra-Solar Terrestrial Planets: Techniques and Technology: Proceedings of a Conference held in Boulder, Colorado, May 14-17, 1995 (Hardback)

Filesize: 9.68 MB

Reviews

Totally among the best publication I have ever go through. This really is for all those who statte that there had not been a well worth studying. I am just very happy to let you know that this is actually the very best pdf we have go through inside my very own daily life and could be he very best ebook for actually.

(Miss Audra Moen)

**THE SEARCH FOR EXTRA-SOLAR TERRESTRIAL PLANETS: TECHNIQUES AND TECHNOLOGY:
PROCEEDINGS OF A CONFERENCE HELD IN BOULDER, COLORADO, MAY 14-17, 1995
(HARDBACK)**

Springer, Netherlands, 1997. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. J 2 J. MICHAEL SHILL, HARLEY A. THRO: SOX, JR. , A: >D S. ALAN STER: 3 I University of Colorado, Dept. of Astrophysical. Planetary, . Atmospheric Sciences 2 University of Wyoming and KASA Headquarters, Code SR 3 Southwest Research Institute, Boulder Office On May 15-17. 1995, three Rocky Mountain research institutions hosted a conference to discuss the scientific basis, technological options, and programmatic implications of a large-scale effort to find and study Earth-like planets outside the Solar System. Our workshop attracted scientists, engineers, space agency administrators, and the public media to discuss and debate the most promising technological options and opportunities. Major programs and proposals to search for and study exo-planets were presented and discussed. In addition, our meeting coincided with NASA's roadmap study for the Exploration of Neighboring Planetary Systems (ENPS). Our meeting was the first international conference on this subject, affording an opportunity for several members of this study to participate in the debates over new technologies. Our meeting proved to be timely. Shortly thereafter, in late 1995 and early 1996, two groups of astronomers announced the first discoveries of planetary companions to nearby stars, using high-precision radial velocity measurements to detect the gravitational reflex motion of the star. The first three detections include a Jupiter-mass companion to the solar-like star 51 Pegasi, and two remarkable objects of mass at least 2.3 and 6. Reprinted from ASTROPHYSICS AND SPACE SCIENCE, 241:1, 1997.
