# Models Methods for Project Selection: Concepts from Management Science, Finance and Information Technology (Hardback)

By Samuel B. Graves, Jeffrey L. Ringuest

Springer-Verlag New York Inc., United States, 2002. Hardback. Condition: New. 2003 ed.. Language: English . Brand New Book ***** Print on Demand *****. Models Methods for Project Selection systematically examines in this book treatment the latest work in the field of project selection modeling. The models presented are drawn from mathematical programming, decision theory, and finance. These models are examined in two categorical streams: the management science stream and the financial model stream. The book describes the assumptions and limitations of each model and provides appropriate solution methodologies. Its organization follows three main themes: *Criteria for Choice: Chapters 1-3 investigate the effect of the choice of optimization criteria on the results of the portfolio optimization problem. *Risk and Uncertainty: Chapters 4-7 deal with uncertainty in the project selection problem. *Non-Linearity and Interdependence: These chapters deal with problems of non-linearity and interdependence as they arise in the project selection problem. Chapters 8, 9 and 10 present solution methodologies, which can be used to solve these most general project selection models.
