

Quantum Gravity in 21 Dimensions

By Steven Carlip

Cambridge University Press. Paperback. Book Condition: New. This item is printed on demand. Paperback. 292 pages. This timely volume provides a broad survey of (21)-dimensional quantum gravity. It emphasises the quantum cosmology of closed universes and the quantum mechanics of the (21)-dimensional black hole. It compares and contrasts a variety of approaches, and examines what they imply for a realistic theory of quantum gravity. General relativity in three spacetime dimensions has become a popular arena in which to explore the ramifications of quantum gravity. As a diffeomorphism-invariant theory of spacetime structure, this model shares many of the conceptual problems of realistic quantum gravity. But it is also simple enough that many programs of quantization can be carried out explicitly. After analysing the space of classical solutions, this book introduces some fifteen approaches to quantum gravity - from canonical quantization in Yorks extrinsic time to Chern-Simons quantization, from the loop representation to covariant path integration to lattice methods. Relationships among quantizations are explored, as well as implications for such issues as topology change and the problem of time. This book is an invaluable resource for all graduate students and researchers working in quantum gravity. This item ships from La Vergne,TN. Paperback.
