

Assessment of nucleotide excision repair protein binding forces by atomic force microscopy and optical trapping

Filesize: 9.01 MB

Reviews

Undoubtedly, this is actually the finest work by any writer. It is really basic but excitement within the fifty percent of your publication. Your way of life period is going to be enhance as soon as you comprehensive looking over this ebook.

(Matt Maggio)

ASSESSMENT OF NUCLEOTIDE EXCISION REPAIR PROTEIN BINDING FORCES BY ATOMIC FORCE MICROSCOPY AND OPTICAL TRAPPING

To get **Assessment of nucleotide excision repair protein binding forces by atomic force microscopy and optical trapping** PDF, you should click the hyperlink under and save the ebook or have access to additional information which might be have conjunction with **ASSESSMENT OF NUCLEOTIDE EXCISION REPAIR PROTEIN BINDING FORCES BY ATOMIC FORCE MICROSCOPY AND OPTICAL TRAPPING** book.

GRIN Verlag Sep 2007, 2007. Taschenbuch. Book Condition: Neu. 210x148x1 mm. This item is printed on demand - Print on Demand Neuware - Scientific Study from the year 2007 in the subject Biology - Genetics / Gene Technology, printed single-sided, grade: A, Boston University, course: Biophysics, 31 Literaturquellen entries in the bibliography, language: English, abstract: DNA is under constant repair from the damage being done from sources such as UV radiation, mutagenic chemicals, and errors made by the cell's DNA replication mechanisms. The ability for a cell to identify and repair the damaged DNA is crucial for the cell to be able to successfully function and replicate. On a systemic scale the repair is essential for maintaining long term genomic stability. When these pathways fail the usual response is for the cell to die but in some instances the damage is done in a region that causes the cell to become carcinogenic. The DNA repair enzymes are responsible for finding and correcting these mistakes. There are many different types of damage that can be done to DNA ranging from dimerization to depurination. Each of these types of damage requires a slightly different repair mechanism. The specific type of damage that is being investigated in this proposal is pyridine dimerization which usually occurs as the result of exposure to UV radiation. The repair pathway being nucleotide excision repair which involves either the replacement or removal of a region surrounding the damaged DNA. Problems in this pathway are important in pathological conditions such as xeroderma pigmentosum which causes the skin to be over sensitive to sun exposure and a high incidence of cancer. Also genetic engineering utilizes deletion and insertion of DNA bases into various different cells. Understanding the pathways utilized to identify the structural changes that signify damage could be utilized...
