

## Lung Cancer Screening: An Update for the U.S. Preventive Services Task Force: Systematic Evidence Review Number 31

By U. S. Department of Health and Human Services

Createspace. Paperback. Condition: New. This item is printed on demand. 64 pages. Dimensions: 11.0in. x 8.5in. x 0.1in. Lung cancer is the second leading cause of cancer in the United States and the leading cause of cancer-related death among men and women. Worldwide, lung cancer and lung cancer related deaths have been increasing in epidemic proportions, largely reflecting increased rates of smoking. In the year 2003, the American Cancer Society predicted that there would be approximately 171, 900 new cases of lung cancer diagnosed and approximately 157, 200 lung cancer-associated deaths in the United States. Worldwide, it is estimated that there were 1 million deaths in the year 2000. Cigarette smoking is the major risk factor for lung cancer, causing approximately 87 of lung, bronchial, and tracheal cancers. Other risk factors include family history, chronic obstructive pulmonary disease, idiopathic pulmonary fibrosis, environmental radon exposure, passive smoking, asbestos exposure, and certain occupational exposures. , In addition, for a given amount of tobacco exposure, some studies suggest that women are at higher risk than men. By far the most important public health intervention that could reduce lung cancer incidence and deaths is changing smoking habits. For many of these reasons, screening for and...
