General definitions of the Trigonometrical We can now give general definitions of the Trigonometrical Ratios which will apply to angles of any magnitude. Let AB, AC be two straight lines at right angles; let a straight line turn round the point A from AB towards AC and come into any position AP; draw PM perpendicular to AB or to AB produced through A. Then consider AP as always positive; consider AM as positive or negative according as M is on the same side of A C as B is, or on the opposite side; and consider PM as positive or negative according as P is on the same side of AB as C is, or on the opposite side. Let the angle PAB be denoted by A; then the Trigonometrical Ratios of A are thus defined: 147. We have therefore Trigonometrical Ratios for any positive angle whatever may be its magnitude; and we have also Trigonometrical Ratios for any negative angle by adopting the convention that the Trigonometrical Ratios for any negative angle shall be the same as they would be for what we may call the corresponding positive angle. Thus, for example, in the last figure we may consider BAP as a negative angle, the magnitude of which is--60; then...
