

Quasiconformal Teichmuller Theory (Hardback)

By Frederick P. Gardiner, Nikola Lakic

American Mathematical Society, United States, 1999. Hardback. Book Condition: New. 256 x 178 mm. Language: English . Brand New Book. The Teichmuller space $\mathcal{T}(X)$ is the space of marked conformal structures on a given quasi conformal surface X . This volume uses quasi conformal mapping to give a unified and up-to-date treatment of $\mathcal{T}(X)$. Emphasis is placed on parts of the theory applicable to non compact surfaces and to surfaces possibly of infinite analytic type. The book provides a treatment of deformations of complex structures on infinite Riemann surfaces and gives background for further research in many areas. These include applications to fractal geometry, to three-dimensional manifolds through its relationship to Kleinian groups, and to one-dimensional dynamics through its relationship to quasi symmetric mappings. Many research problems in the application of function theory to geometry and dynamics are suggested.

Reviews

Undoubtedly, this is the best function by any writer. This really is for those who statte there was not a really worth reading. Its been written in an exceptionally basic way which is merely right after i finished reading through this book by which really transformed me, change the way i really believe.
