

Report on the Injurious and Other Insects of the State of New York Volume 34

By New York State Entomologist

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 Excerpt: .The species was reared by W. H. Patterson, St Vincent, W. I. from a green, conical gall with a length of about 4 mm, and a diameter of 1.5 mm, on the upper surface of the leaves of Eupatorium, the insects pupating within the deformity. It is provisionally referred to Hyperdiplosis because of the reduced circumfila and the deeply and roundly excavated ventral plate. The antennal stems of the typical Hyperdiplosis are more produced and the claws more strongly bent than in this West Indian form. Hyperdiplosis americana Felt 1911 Felt, E. P. N. Y. Ent. Soc. Jour., 19:192 The small, pale midges were reared in numbers from a section of dead, partly decayed wild fig branch collected by E. A. Schwarz at Paraiso, Panama, and forwarded to this office by H. S. Barber under date of May 15,1911. The adults appeared from the 31st of...
